End of Sprint #3 Review

The goal of this sprint was to come up with a minimum viable product. The entire team worked closely with one another to ensure tasks were done by the corresponding deadlines. The initial tasks we had were to (1) Make the web server utilize database and front-end view, (2) Write integration tests for login/registration system, (3) Build a view for requesting and responding to a letter, and (4) To work on coming up with a finalized design.

Harmanjot - Worked on endpoints with Sarah. Created dashboard to send a message and for response. Looked for bugs and errors. Worked with Eric on debugging. Also worked on caching system.

Eric - Worked on managing database tables and also collaborated with Harmanjot on backend. Worked on backend requests. Worked with Sarah to implement an inbox view. Halfway through the sprint, finished with 70% of inbox view.

Sarah - Implemented viewing letters. Met with Eric about the inbox view. Worked on integration for sending letter. Testing components.

Dhanush - Scrum master, worked on coming up with a finalized design.

Overall, our team was able to meet our goal by the end of the sprint. There was no backlog, and any existing backlog was taken care of. We were ready to present the MVP to our TA.
