SafeHouse

Sprint #1 Review

Team Speakeasy
1/26 - 2/8

Effective Practices

The team agrees that our current method of scrum + general meeting every "scrum meeting" helps everyone properly touches base as well as better understand the goals of each scrum period. Additionally, the team mentioned that monday.com works well as a scrum board, making it easier to figure out what tasks to do once idling.

Ineffective Practices

The team should stop isolating tasks into separate frontend and backend tasks, as that leads to integration being much more inefficient as well as multiple devs being idle/improperly utilized.

Needed Practices

The team should provide updates through the necessary channels when blocked to reduce idling. Additionally, the team needs to either reduce the work assigned each sprint or increase hours spent working on tasks, as a majority of the user stories are backlogged.

Finished/Unfinished Work

Finished:
US 1: As a user, I want the ability to access the landing page of the website.
US 2: As a service admin, I want a functioning web server to host future web services.

Unfinished:
US 3: As a user, I want the ability to register for an account.
US 4: As a user, I want the ability to log in to my account/stay logged in to my account.
US 5: As a user, I want the ability to log out of my account.

Work Completion Rate: Finished 7 out of the 22 hours in tasks (32%).
[Burnup Chart](#)
Hours per day: As we began work ~ 1 week before the sprint ended, as a team we logged an average of 1 hour per day.
